

Statement by Electrical and Computer Engineering Faculty in support of a free and fair union vote

While the undersigned do not express an opinion here on the outcome of the unionization election, we believe that the university should:

- Support a free and fair election in accordance with NLRB procedures. All eligible voters should be given an opportunity to vote and be encouraged to vote then a majority of votes cast should determine the outcome.
- Limit spending time and money on anti-union activities and focus the administration's efforts on the many other pressing concerns at the university.
